## GENERAL TECHNICAL INFORMATION

The best polishing effect is obtained by exerting low pressure on the object to be treated and by reducing the speed.

Due to the material used, small and infinitely small particles of the head material detach during the polishing process. Make sure that these particles are sufficiently removed by suction and wear

## PLASTIC CENTERS WITH CONICAL BORES FOR HOLDING THE SPINDLE

The blue plastic centers for the buffing wheels (1.1 to 1.11), the circular brushes (3.1 to 3.5) and circular brushes (13. to 18.), as well as the brown plastic centers for the wheel brushes (2.1) are provided with conical bores for holding the spindles.

When attaching these centers to the spindles, make sure that the conical bore of the spindle matches the spindle reception of the polishing disc!

If this is not complied with, the plastic center will not fit tightly on the spindle. When applying a corresponding load, this may cause the center to jump off the spindle or even break.

## BUFFING WHEELS – CHAMOIS LEATHER DISCS AND STRIPS (1.6 / 3.2 / 4.1.5)

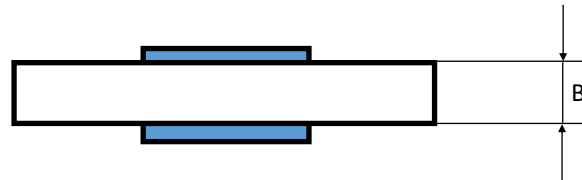

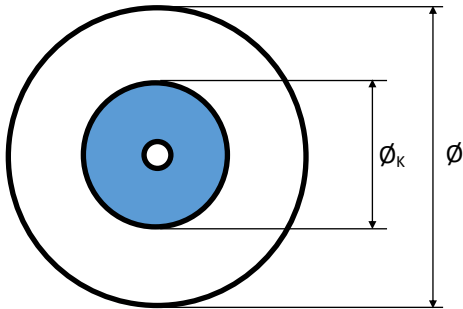

Chamois leather is particularly well-suited for the final polishing or touching up of all metals or polyamides, bakelite, caoutchouc, paladon, horn, etc. The chamois leather buffing wheels and circular chamois leather brushes should only be used for dry polishing.

Owing to the material used, the buffing wheels cannot be entirely free from dust and fluff. Therefore, please take care that dust and fluff is sufficiently removed by suction and make sure to wear safety

## LATHE BRUSHES WITH PLASTIC CENTER (4.2)

After use make sure to unscrew the brushes from the spindle – do not pull them off (!) since the plastic center could be quite hot. If this is not observed, the center may separate from the sleeve.

### Abbreviations of measurement units

$\varnothing$ : Outer diameter of brush

$\varnothing_k$ : Centre diameter of brush

$B$ : Width of brush

$D$ : Wire diameter  
(Only for brushes with filled with wire)

$R_E$ : When brushes are interleaved it shows the ratio between brush rows and interleaved rows.  
E.g. 2/1  $\hat{=}$  2 brush rows and 1 interleaved row

### Other abbreviations and symbols

Arrangement of bristles / hairs:

$R$ : Amount of Bristle Rows

■: Straight arrangement:  
All bristles are arranged perpendicular to the core.

▲: Converging arrangement:  
Bristles of the outer rows are inclined towards the center of the brush.

HK: Brush with wooden centre.

KK: Brush with plastic centre.

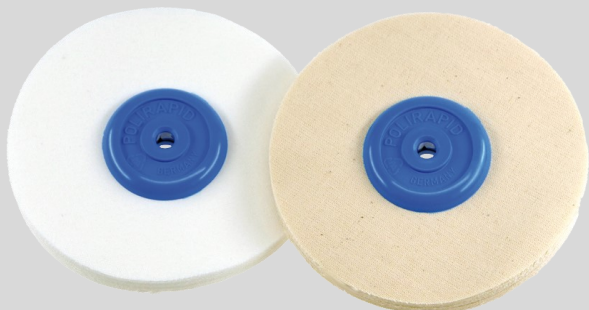

PU: Packaging unit. Refers to the given code number of the article as most common packaging unit. For different packaging units please refer to the code numbers stated on the current price list
